Recovery-conditioned twin and information boundaries

EHR + observed past

Resting baselines / PEF best
HR / RR / steps / PM2.5

Nine-state bank

3 explanations x 3 recovery settings
Kalman state updates
Tempered hypothesis evidence

Forecast + probe

Two-hour PEF mixture
Calibrated risk index
Quadrature information score

Doctor workspace

Inspect hypotheses
Simulate observation
Review uncertainty

New current observation

Synthetic probe only
Budget + cooldown
No future targets

Offline experiments

48 train / 16 calibration / 24 test
Ablations / two-probe policies / raw predictions

Future target values and hidden simulator states are scoring-only; inference receives observed rows through time t.
